Office No. 4, 6th Floor,
Askari Corporate Tower,
75/76 D-1, Main Boulevard
Gulberg III, Lahore-54660
Pakistan.

COST AUDITORS' REPORT TO THE DIRECTORS

We **BDO EBRAHIM & CO., Chartered Accountants** having been appointed to conduct an audit of cost accounts of **The Thal Industries Corporation Limited ("the Company"),** have examined the books of account and the statements specified under the first proviso to sub-section (1) of section 220 of the Companies Act, 2017 and other relevant record for the year ended on September 30, 2022 and report that:

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of this audit.

In our opinion:

(a) proper cost accounting records as required by first proviso to sub-section (1) of section 220 of the Companies Act, 2017 (XIX of 2017), and as required by these regulations, have been kept by the Company;

(b) proper returns, statements and schedules for the purpose of audit of cost accounts have been received from branches not visited by us; and

(c) the said books and records give the information required by the regulations in the manner so required.

In our opinion and, subject to the best of our information:

(a) the annexed statement of capacity utilization and stock-in-trade are in agreement with the books of account of the Company and exhibit true and fair view of the Company's affairs; and

(b) cost accounting records have been properly kept so as to give a true and fair view of the cost of production, processing, manufacturing, marketing, cost of sales, profit margin on indigenous and export sales and any other information of the product of the Company, namely White Refined Sugar.

The matter contained in the Appendix III forms part of this report and approved by the Board on March 29, 2023.

LAHORE

DATE: 29 MAR 2023

Engagement Partner: Muhammad Imran

BDO

COST AUDITORS' REPORT (APPENDIX III)
TO THE DIRECTORS OF THE THAL INDUSTRIES CORPORATION LIMITED
FOR THE YEAR ENDED SEPTEMBER 30, 2022

1. CAPACITY:

		2022	2021
(a) Licensed, installed and utilized capacity:			
Designed crushing capacity:			
Layyah Sugar Mills	Metric Tons / Day	15,000.000	15,000.000
Safina Sugar Mills	Metric Tons / Day	8,000.000	8,000.000
		23,000.000	23,000.000

(b) Percentage utilization

Capacity on the basis of operating days	Metric Tons	3,190,000.000	2,610,500.000
Capacity utilized by the mill (tonnes per day)	Metric Tons	22,170.036	20,921.591
No. of days worked	Days	138.000	113.500
Actual crushing (utilized capacity)	Metric Tons	3,059,465.013	2,374,600.590
Percentage of capacity attained	%	95.908%	90.963%
Sugar production from cane	Metric Tons	305,521.000	228,107.000
Recovery of sugarcane	%	9.986	9.606

Normal installed capacity is mentioned above. The capacity has been mentioned after adjusting number of shits, holidays, normal shut downs days and normal idle time, loss in efficiency due to ageing of the equipment/plant or any other factor (where applicable and relevant).

During the year, there is an increase in actual crushing compared to last year because of the increase in crushing days and better supply of sugarcane as compared to last year.

(c) The Company is not engaged in any other activity except manufacturing and sale of white sugar, molasses and allied by-products.

(d) The Company owned this capacity. The Company has not engaged any leasing arrangements/loan/outsourcing in this regard.

2. COST ACCOUNTING SYSTEM:

Manufacturing of sugar is a continuous process. The Company uses financial and cost integrated accounting system which shows overall cost of production.

The Company is using integrated accounting software, whereby the cost accounts are integrated with the financial accounting records. The cost accounting functions and financial accounting functions are combined in one system of ledger accounts. This enables the company to get information regarding cost records at any point of time. All transactions related to costs of production are incorporated in the books of accounts and their effect is reflected in the costing reports. According to the Company's practice, the actual costs incurred during the year are allocated to the sugar manufactured during the year on actual basis.

There was no change in the cost accounting policy for goods under audit during the current financial year as compared to previous financial year.

The existing system can generate various cost reports some of which are as follows:

Direct department cost.
Distribution of total production cost into raw material and other manufacturing cost.
Detail of direct cost of sugar.
Detail of total cost of sugar.
Direct and indirect cost of salaries and wages.
The cost of each service department.
Stock valuation of stores, spares and loose tools.
Direct cost of production departments.
Total cost of production departments.

BOO

We have assessed the functionality of the cost accounting system and found it adequate to determine the cost of Company's products correctly. Our review of the system and procedures adopted by the Company reveal that the adequate information and analysis regarding cost of product is generated for the management.

3. PRODUCTION :		2022 (Metric tons)	2021 (Metric tons)
(a) Installed Capacity in metric tons			
Main product:			
White refined sugar		318,556.344	250,767.782
By products:			
Molasses		139,113.450	114,767.684
Bagasse		915,992.550	748,558.161
Press Mud / Filter Cake		95,700.000	78,315.000
(b) Production in metric tons			
White refined sugar		305,521.000	228,107.000
By products:			
Molasses		133,420.919	104,396.633
Bagasse		878,510.081	680,914.250
Press Mud / Filter Cake		91,783.950	71,238.018
(c) Percentage utilization			
Main product:			
White refined sugar	%	95.908%	90.963%
By products:			
Molasses	%	95.908%	90.963%
Bagasse	%	95.908%	90.963%
Press Mud / Filter Cake	%	95.908%	90.963%
(d) Actual Recovery			
White sugar	%	9.986%	9.606%
Molasses	%	4.361%	4.396%
Bagasse	%	28.715%	28.675%
Filter Cake	%	3.000%	3.000%

The mills of the Company have crushed 3,059,465 (2021: 2,374,600) tonnes of sugarcane in comparison with the licensed /installed capacity of 3,190,000 (2021: 2,610,000) tonnes available based on the total number of days 138.00 (2021: 113.50 days) of the crushing season. This is 95.91% (2021: 90.96%) utilization of available capacity.

Explanation for shortfall

Non-availability of sugarcane in sufficient quantity and quality was the limiting factor due to which the capacity utilization is 95.91% (2021: 90.96%) as compared to installed capacity.

Explanation of variances

In current year, 33.938 % increase in sugar production can be attributed to 28.841 % increase in crushing as compared to last year. Sugarcane crushing was higher this year because of increase in number of crushing days and better supply of sugarcane as compared to last year.

BDO

(e) Addition to production capacity

Layyah Sugar Mill:

We have noted that installed capacity of the Layyah Sugar Mill has been increased over the periods. We understand from management that an amendment in section 11 of the Punjab Industries (Control on Establishment and Enlargement) Ordinance, 1963 (the Ordinance) was made by the government and as per notification "The Government may exempt an industrial undertaking or class of industrial undertaking dully established under this Ordinance from all or any of the provisions of this Ordinance or the rules and may regularize contravention of any of the provision of this Ordinance committed till the commencement of the Punjab Industries (Control on Establishment and Enlargement) (Amendment) Act, 2022 (the Act), subject to payment of such requitals as the Government may determine.

In pursuance of the amendment in section 11 of the Ordinance, the Company has submitted an application dated December 08, 2022 for regularization of its enhanced crushing capacity upto 24,000 TCD for Layyah Sugar Mill. As per the decision, the application in hand was forwarded to the Technical Sub-Committee for scrutiny, evaluation and recommendation. The Technical Sub-Committee visited the Company and submitted its report vide letter dated January 03, 2023, for further deliberation and consideration. Accordingly, the Committee unanimously recommended that the initial capacity of the Company is considered zero TCD as per NOC/permission letter of the Government and recommended and regularized that the crushing capacity to the maximum upper limit of 18,000 TCD of the Company, subject to submission of the requital amount (Rs. 180 million) and fulfillment of all legal/local formalities.

Safina Sugar Mills:

We have noted that installed capacity of the Safina Sugar Mill has been increased over the periods as well. In pursuance of the amendment in section 11 of the Ordinance as detailed above, the Company has submitted an application dated December 08, 2022 for regularization of its enhanced crushing capacity upto 18,000 TCD for Safina Sugar Mill. As per the decision, the application in hand was forwarded to the Technical Sub-Committee for scrutiny, evaluation and recommendation.

The Technical Sub-Committee visited the Company and submitted its report vide letter dated December 23, 2022, for further deliberation and consideration. Accordingly, the Committee unanimously recommended that the initial capacity of the Company is considered zero TCD as per NOC/permission letter of the Government and recommended and regularized that the crushing capacity to the maximum upper limit of 12,000 TCD of the Company, subject to submission of the requital amount (Rs. 120 million) and fulfillment of all legal/local formalities.

Percentage utilization			**As per Cost Accounts**	**As per Regularized**
Layyah Sugar Mills	Metric Tons / Day		15,000.000	18,000.000
Safina Sugar Mills	Metric Tons / Day		8,000.000	12,000.000
			23,000.000	30,000.000
Capacity on the basis of operating days		Metric Tons	3,190,000.000	4,140,000.000
Capacity utilized by the mill (tonnes per day)		Metric Tons	22,170.036	22,170.036
No. of days worked		Days	138.000	138.000
Actual crushing (utilized capacity)		Metric Tons	3,059,465.013	3,059,465.013
Percentage of capacity attained		%	95.91%	73.900%
Sugar production from cane		Metric Tons	305,521.000	305,521.000
Recovery of sugar cane		%	9.986	9.986

BDO

(f) Comparison of machine hours utilization (during crushing season)

	2022	2021	2020
	Audited	Audited	Un-audited
Available hours	3,320.525	2,699.925	2,594.375
Utilized hours	3,083.265	2,564.135	2,109.510
% age	92.855%	94.971%	81.311%

Explanation of variances

Available hours is dependent upon no of working days i.e. 138 days (2021: 113.50 days). Increase in available hours is due to increase in number of crushing days. Decrease in percentage of utilization during current year is due to ineffective use of available hours. This year plant stops for more period i.e. 9.89 days (2021: 5.66 days) thus decreasing the percentage of utilization in relation to installed capacity by 2.12 %.

Available hours is dependent upon no of working days i.e. 138 days (2020: 109.50 days). Increase in available hours is due to increase in number of crushing days. Increase in percentage of utilization during current year is due to effective use of available hours. This year plant stops for lesser period i.e. 9.89 days (2020: 20.20 days) thus increasing the percentage of utilization in relation to installed capacity by 11.54 %. Main reason for more lost hours in 2020 was less supply of sugar cane in that financial year (FY).

4. RAW MATERIALS:

(a) Consumption of major raw materials in terms of quantity and value:

Raw Materials	2022		2021	
	Quantity Consumed (metric tons)	Amount (Rupees)	Quantity Consumed (metric tons)	Amount (Rupees)
Sugarcane (See annexure – 3)	3,059,465	18,256,814,440	2,374,601	15,397,609,187
Process material (See annexure - 5)		270,320,613		131,389,762

(b) Consumption of major materials per unit of production:

Raw Materials	Actual Consumption Per Unit (per metric ton of Sugar)		
	2022	2021	2020
	Audited	Audited	Un-audited
Sugarcane (See annexure – 3)	10.014	10.410	10.397

Consumption of raw material per unit of production is dependent on many factors, such as sucrose contents/sugar recovery percentage, quality of sugarcane, elapsed time between sugarcane harvesting and crushing, distance from sugarcane field and factory site and un-interrupted milling/crushing etc.

Although no standard has been fixed for cane procured and consumed, company strives to consume fresh and clean cane. Since, the Company did not operate a 'Standard Costing System' ; comparison of actual raw material consumption with standard could not be made. Therefore, variances could not be worked out.

All the raw material used in production is domestic. There is no imported raw material is used in production. However, some chemicals (i.e. hard coke, decolorizer, sugar press oil, etc.) are being imported and used as other materials.

(c) Explanation of variances

Sugarcane yield depends upon the quality of sugarcane; and the quality varies with the maturity of the crop and quality of seed implanted in crop. Good quality of seed combined with higher maturity of crop means higher quality of sugar cane and higher yield of sugar. Raw material consumption of cane has increased by 684,864 and 1,085,710 metric tons as compared to 2021 and 2020 respectively due to increased availability of sugarcane.

BDO

Consumption of sugarcane per tonne of sugar has decrease by 3.81% to 10.01 per tonne of production (2021: 10.41) because of higher recovery during the year i.e., 9.99% as compared to last year's recovery 9.60%.

Consumption of sugarcane per tonne of sugar has decrease by 3.68% to 10.01 per tonne of production (2020: 10.39) because of higher recovery during the year i.e., 9.99% as compared to last year's recovery 9.61%.

(d) Comments on the method of accounting followed for recording the quantities and value of receipts, issues and balances of all material directly used in production

Sugarcane is procured mainly at the mills directly and partially at depots situated at a number of locations. Cost of purchase of raw material comprises of transport, government levies, handling and other costs directly attributable to the acquisition of materials. Purchases of sugarcane are accounted for when they are received at mill / purchase centers. Value of material consumed is taken on actual basis. The raw material is valued by applying the average cost / weighted average method

Sugarcane receipt at mills

The Company is using its in house developed Software Module named as Crop Management System (CMS) for recording the purchase Sugarcane at its mills. Sugarcane is brought to the factory using different modes of transportation e.g. trolleys, trucks, carts and trailers. Whatever the haulage is, a computerized token and gate pass is given to the haulage. At the weighing post the gross weight of the haulage is measured. The gross weight (Sugar Cane + Haulage) is entered into the database by an online weighing machine into the system. The haulage is then unloaded and at the weighing post the tare weight of the haulage is entered into the database by the same online weighing machine into the system. The net weight is automatically calculated by the software. After measuring the net weight, a computerized Cane Purchase Receipt (CPR) is generated. It is a document which acknowledges the supply of cane made by the grower and contains the net weight procured and amount payable to the grower. Upon the generation of CPR, an automated Purchase order is created in the CMS application with the net weight and amount payable to the grower based on the CPR. The purchase is recorded at the market value as already defined in system time to time. An automated receipt of the cane is recorded by the system based on the purchase order. The receipt is recorded at a value which is a sum of the cost of cane at PO and the direct procurement costs per unit like cane development cess, market committee fee, unloading charges etc.

The cane is issued to consumption as raw material consumed at cost.

Sugarcane receipt at depots

The depot is a purchase center where the Company purchases Cane and brings it to the factory using the transport of the contractor. The Company has opened depots at various places in order to increase and facilitate the sugar cane growers. A weigh bridge has been installed at each depot where a net weight of cane received is measured through laden and un-laden weight of haulage. Manual CPRs are then issued on weighing the sugarcane received at depots. The details of CPRs are entered in Cane Purchase Sheet of respective depots. Cane is then sent to the mills where it is weighed again and recorded in the system and a computerized CPR is generated against Cane received from respective depots. Thereafter the PO, receipt, issuance and accounting process takes place similar to the process of purchase at mills mentioned above.

(e) Other direct material used in production

Other direct material used includes unslaked lime, soda caustic flakes, phosphoric acid, decolorizing agent etc. The Company has computerized inventory system in which all the material purchased is recorded at the respective rates in separate accounts and consumption is charged on daily basis at the moving average rate calculated by the system. The purchases are recorded by Product Receipts (PRs) while consumption is recorded on the basis of approved Internal Purchase Requisition (IPRs).

Transportation expenses during the year were Rs. 11.879 million (2021: Rs. 6.250 million).

BDO

5. WAGES AND SALARIES:

(a) Wages and salaries paid to different categories of employees are as follows:

	2022 (Rupees)	2021 (Rupees)
i. Direct labour cost on production	448,457,359	313,567,480
ii. Indirect employees cost on production	113,194,744	98,724,327
iii. Employees cost on administration	425,563,359	314,399,809
iv. Employees cost on selling and distribution	14,343,030	11,067,814
v. Other employees cost	-	-
Total wages and salaries	1,001,558,492	737,759,430
* vi. Bonus to workers and employees	55,245,098	165,140

* It is included in items (i) to (iv) above.

(b) Salary and perquisites of directors and chief executive are as under:

	Chief Executive		Directors		Executives	
	2022	2021	2022	2021	2022	2021
	Rupees					
Managerial remuneration	2,040,000	2,040,000	2,040,000	2,040,000	104,254,989	106,135,180
Meeting Fee	80,000	-	520,000	-	-	-
Utilities	-	-	-	-	4,434,035	3,537,839
Bonus	-	-	-	-	14,858,880	15,265,085
Gratuity expense	-	-	-	-	11,418,899	9,537,288
	2,120,000	2,040,000	2,560,000	2,040,000	134,966,803	134,475,392
Number of persons	1	1	1	1	33	31

The executives have been provided free unfurnished accommodation with maintained car for the Company's affairs only.

Chief executive, directors and executives are not entitled for any benefit other than disclosed as above.

(c) Total man-days of direct labour for the year :

During the crushing season	2022 (Days)	2021 (Days)	Increase / (decrease)	Percentage%
Total man-days of labour available - average	376,850	288,574	88,277	30.59%
Total man-days of labour actually worked - average	350,824	271,638	79,186	29.15%
Percentage worked	93.09%	94.13%		
Other than crushing season				
Total man-days of labour available - average	353,212	376,590	(23,378)	-6%
Total man-days of labour actually worked - average	353,212	376,590	(23,378)	-6%
Percentage worked	100%	100%		
Average number of workers employed				
During the crushing season				
Direct and in-direct labour (including contract staff)	2,731	2,543	188	7%
Other than crushing season				
Direct and in-direct labour (including contract staff)	1,556	1497	58.63	4%

1300

(d) Direct labour cost per unit of output of the product

		2022	2021	2020
		Audited	Audited	Un-audited
Total labour cost on production	(Rupees)	561,652,103	412,291,807	497,519,545
Direct labour cost on production	(Rupees)	448,457,359	313,567,480	410,009,606
Indirect labour cost on production	(Rupees)	113,194,744	98,724,327	87,509,939
Production of White Refined Sugar	(Metric tons)	305,521	228,107	189,843
Total labour cost per unit of output	(Rupees)	1,838.34	1,807.45	2,620.69
Direct labour cost per unit of output	(Rupees)	1,467.84	1,374.65	2,159.73
Indirect labour cost per unit of output	(Rupees)	370.50	432.80	460.96

(e) Explanation for variances

Comparison with 2021

- Direct labour cost

The increase in direct labour cost by Rs. 134.889 million as compared to 2021 is mainly due to increase in crushing days and increase in minimum wage as compared to 2021. Direct labour cost per tonne of production has increased by Rs. 93.19 per tonne from 2021 due to increase in minimum wage.

- Indirect labour cost

Indirect labour cost has increased by Rs. 14.470 million as compared to last year due to salary increments and bonuses. Indirect labour cost per tonne of production has decreased by Rs. 62.30 per tonne from 2021 due to increase in production.

Comparison with 2020

- Direct labour cost

The increase in direct labour cost by Rs. 38.447 million as compared to 2020 is mainly due to increase in crushing days and increase in minimum wage as compared to 2020. Direct labour cost per tonne of production has decreased by Rs. 691.89 per tonne from 2020 due to increase in production.

- Indirect labour cost

Indirect labour cost has increased by Rs. 25.684 million as compared to last year due to salary increments and bonuses. Indirect labour cost per tonne of production has decreased by Rs. 90.46 per tonne from 2020 due to increase in production.

(f) Comments on Incentive scheme, with particular reference to its contribution towards increasing productivity and its effect on cost of production

Bonus scheme is in place which is based on the discretion of the Board of Directors and covers the permanent employees of the Company. Two bonuses has been provided/recognized during the year 2022. However, in prior year 2021, no bonus was given. There is also an increment in salaries of all of the employees of the company in 2022.

Due to more bonuses and increments during the year, total direct and indirect labour costs have increased as compared to last year. Also increased average no. of workers employed during the year has an impact.

		2022	2021	2020
		Audited	Audited	Un-audited
Cost of bonus per metric ton of output (Annexure-6)	(Rupees)	180.82	0.72	735.93

BOO

6. STORES AND SPARE PARTS:

(a) Expenditure per unit of output on stores and spare parts:

		2022	2021	Variance %
Process material (Annexure 5)	(Rupees)	270,320,613	131,389,762	105.74%
Consumable stores	(Rupees)	17,447,999	11,427,481	52.68%
Packing material	(Rupees)	225,757,515	120,904,345	86.72%
Printing and stationery	(Rupees)	1,134,176	1,205,391	-5.91%
Total store and spares consumed	(Rupees)	514,660,303	264,926,980	94.26%
Production of sugar	(Metric tons)	305,521.00	228,107.00	33.94%
Stores and spares per unit of production	(Rupees)	1,684.53	1,161.42	45.04%

Explanation of variances

Consumption of chemicals and stores including packing material and oil and lubricants has increased by Rs. 249.733 million (94%) as compared to the last year, this increase is due to increase in production during the year, linkage of imported chemical prices with exchange rate fluctuations, packing materials prices with the petroleum products prices and increase in handling cost of bagasse. Further, increase in store consumption also has the effect of issuance of mechanical, electrical and general store items to consumption.

(b) Comments on the system of stores accounting for recording receipts, issues and balances, both in quantities and values

Receipt recording

The Company follows perpetual method of accounting for stores and spares. These are valued at moving average cost except stores in transit which are stated at cost comprising invoice value plus other charges paid thereon. These are valued at cost comprising of purchase price, import duties, other taxes, and other costs directly attributable to the acquisition of stores and spares except transportation and handling cost which is separately charged to production.

Consumption recording

Stores and spares consumption is recorded on the basis of Internal Purchase Requisitions (IPRs) valued on the basis of weighted average rate having separate code for each type of material in stores. The store department receives the IPRs and then by properly authorizing the issue, the store item is issued to the relevant department.

Allocation

Stores and spare consumption is based on actual consumption towards various cost centers.

(c) Proportion which have not moved for over twenty four months:

	2022 (Rupees)	2021 (Rupees)
Total stores and spares	920,997,193	752,263,119
Slow moving stores	17,491,101	23,180,874
% age	2%	3%
Not moved for over twelve / (2021 twenty four) months	17,491,101	23,180,874

No provision have been made against the above given items which have not been moved for over one to two years. According to management these items can be utilized in plant's normal course of operation during its useful life and are not technically obsolete.

BDO

7. DEPRECIATION:

(a) Method of depreciation

Depreciation on operating fixed assets except freehold land are stated at cost less accumulated depreciation and impairment losses, if any. Freehold land is stated at cost. Depreciation is charged by applying reducing balance method over the estimated useful life of an asset at the rates specified in financial statements. Depreciation is charged on additions during the year from the month in which property, plant, and equipment become available for use while no depreciation is charged from the month of deletion/ disposal. The useful life and depreciation method are reviewed to ensure that the method and period of depreciation charged during the year are consistent with the expected pattern of economic benefits from items of operating fixed assets. Appropriate adjustments are made if the impact of depreciation is significant.

(b) Basis of allocation of depreciation on common assets

Depreciation on assets identifiable to various cost centers is charged on actual basis while deprecation for assets under common use is charged to cost centers on the basis of services rendered to the respective departments i.e. 10% Admin and 90% Cost of sales.

(c) Basis of charging depreciation to cost of products

The depreciation of depreciable assets relating to units involved in the manufacturing of product is charged to the cost of production.

(d) There is no change in the accounting policy for depreciation during the year as compared to last year.

BDO

8. OVERHEADS

(a) Total amount of overheads

(b) Reasons for variances

Factory overheads

The factory overheads in current year have been increase by Rs. 98.833 million (45.53%) as compared to 2021. The increase is mainly due to increase in vehicle running expenses by Rs. 68.819 million, repair and maintenance expenses by Rs. 12.415 million and indirect labour cost by Rs. 14.470 million.

BDO

The factory overheads in current year have been increased by Rs. 154.940 million (96.25%) as compared to 2020. The increase is mainly due to increase in vehicle running expenses by Rs. 107.104 million, repair and maintenance expenses by Rs. 19.488 million and indirect labour cost by Rs. 25.684 million.

The increase in vehicle running expense is represented by fluctuations in fuel prices, increase in repair and maintenance is due to increase in number of operating days and repairing charges, increase in indirect labour is due to bonus and increase in actual crushing labour hours.

Administrative overheads

The administrative expenses in current year have been increased by Rs. 50.995 million (8%) as compared to 2021. The increase is mainly due to increase in salaries, wages and other benefits by Rs. 111.164 million, rent, rates and taxes by Rs. 7.083 million, vehicle running expenses by Rs. 10.054 million, entertainment expenses by Rs. 10.771 million and fee and subscription expenses by Rs. 10.116 million. Conversely, there is decrease in provision for doubtful debts and legal and professional expenses amounting to Rs 70.170 million and 27.750 million respectively (other expenses).

The administrative expenses in current year have been increased by Rs. 32.249 million (5%) as compared to 2020. The increase is mainly due to increase in salaries, wages and other benefits by Rs. 101.753 million, rent, rates and taxes by Rs. 4.920 million, vehicle running expenses by Rs. 11.546 million, entertainment expenses by Rs. 3.477 million and fee and subscription expenses by Rs. 11.627 million. Conversely, there is decrease in legal and professional amounting to Rs 64.284 million.

The increase in salaries, wages and other benefits is due to annual increment, bonus and increase in average number of employees, increase in repair and maintenance is due to increase in number of crushing days, Increase in rent, rates and taxes is due to fluctuations in rent prices, increase in vehicle running expenses is due to increase in fuel prices. The decrease in legal and professional expenses is due to decrease in number of legal cases against Company.

Selling and distribution overheads

The selling and distribution expenses in current year have been decreased by Rs. 8.814 million (3.84%) as compared to 2021. The decrease is only because of decrease in Freight outward expenses by Rs. 45.122 million due to decrease in sale. There is an increase in stacking/restacking and loading/unloading expenses by Rs. 28.227 million and 2.735 million respectively because of increase in production of sugar bags and molasses.

The selling and distribution expenses in current year have been increased by Rs. 59.664 million (41.09%) as compared to 2020. The increase is mainly due to increase in stacking/restacking expenses by 39.400 million due to increase in production od sugar bags and molasses. Increase in freight outward and loading/unloading expenses by Rs. 4.552 million and 4.115 million respectively is due to increase in sale.

Financial charges

Financial Charges: The finance cost has increased by Rs. 322.148 million i.e. 69.60% as compared to 2021. This increase is mainly because of the increase in finance cost on short term and long term borrowing due to increase in mark-up rates. There is also increase in short term borrowing during the year to finance the cane procurement cost.

Financial Charges: The finance cost has increased by Rs. 10.984 million i.e. 1.42% as compared to 2020. This increase is mainly because of the increase in finance cost of short term borrowing amounting to Rs 158.232 million due to increase in mark-up rates. There is also increase in short term borrowing during the year to finance the cane procurement cost. Conversely, there is decrease in finance cost of long term borrowings due to reduction in number of long term borrowings.

(c) **Basis of allocation**

Identifiable costs are separately allocated to each cost center, while common costs are allocated on some rational basis like telephone, postage and telegram are allocated on the basis 20% to production and 80% to administration and building repair and maintenance is allocated 80% to production and 20% to administration.

BDO

(d) **Cost of packing**

	2022	2021	2020
	Audited	**Audited**	**Un-audited**
Total Sugar produced (metric tons)	305,521	228,107	189,843
Packing materials/number of bags consumed (rupees)	225,757,515	120,904,345	99,548,372
Cost per metric ton of sugar (rupees per metric ton)	738.93	530.03	524.37

Explanation for variances

Packing cost comprises of cost of polypropylene bags, thread cones, polythene bags etc. The increase in packing material cost is approx. 86.72% as compared to 2021 and 126.78% as compared to 2020. This increase is due to increase in production and increase in rate per bag of packing material purchased as compared to previous years.

9. ROYALTY PAYMENTS:

No royalty or technical aid payments have been made during the year.

10. ABNORMAL AND NON-RECURRING FEATURES:

(i) There were no abnormal features like strikes, lockouts, major breakdowns in the plant and serious accidents affecting production during the year.

(ii) There were no abnormal expenses incurred during the year that have been charged to the products.

11. COST OF PRODUCTION:

Exclusive of sales tax

	2022 (Rupees)	2021 (Rupees)	Increase/ (Decrease)
Cost of goods manufactured	17,018,970,800	14,727,474,065	15.56%
Cost per metric ton of goods manufactured	55,622.82	63,735.35	-12.73%
Cost to make and sell	13,965,862,716	16,507,813,175	-15.40%
Cost per metric ton of sold sugar	64,883.67	68,703.87	-5.56%
Inclusive of sales tax			
Cost of goods manufactured	17,018,970,800	14,727,474,065	15.56%
Cost per metric ton of goods manufactured	55,622.82	63,735.35	-12.73%
Cost to make and sell	18,687,709,096	21,721,318,336	-13.97%
Cost per metric ton of sold sugar	86,820.78	90,401.96	-3.96%

Both inclusive and exclusive cost analysis for cost to make and sell have been provided, with the inclusion of sales tax being a part of the cost in the previous year. This year, both types of analysis have been presented.

1300

Comments on the reasons for differences in cost of production (as per cost statements)

The total cost of production has increased by Rs. 2,291.496 million (15.56 %) as compared to last year. This increase is mainly due to increase in sugarcane crushed by 684,864 tons (28.841%) as compared to the previous year.

The cost per ton of production of white bagged sugar has decreased by Rs. 8.113 per ton as compared to last year. This decrease in cost per ton is mainly due to an increase in production, a better supply of sugar cane, better recovery, decrease in average purchase price of cane and attain better efficiency during the year as compared to last year.

It has been observed that there is only one category, variety or quality of the product under reference. As per cost order under Regulation 1(2) "Every Company engaged in the production, processing and manufacturing of sugar in any form except liquid, is required to maintain particulars of cost accounting record and prepare cost statements."

The cost per metric ton of sold sugar has been revised for comparative year due to over valuation adjustment of stocks.

	2022 (Metric tons)	2021 (Metric tons)
12. SALES:		
(a) Net sales realization		
Sales white sugar (own manufactured)	215,244.65	240,274.85
Export of white sugar (own manufactured)	-	-
Total Sales	215,244.65	240,274.85

	2022		2021	
	Rupees	Rupees per metric ton	Rupees	Rupees per metric ton
Local sales white sugar (own manufactured)	18,687,709,096	86,821	21,721,318,336	90,402
Less: Sales Tax / Special Excise duty	(2,764,001,613)	(12,841)	(3,150,484,795)	(13,112)
Net Sales	15,923,707,483	73,980	18,570,833,541	77,290

	Increase/ (Decrease)	Percentage
	Rupees per metric ton	
Local Sales white sugar (own manufactured)	(3,581)	-3.96%
Export of white sugar (own manufactured)	-	0.00%
Less: Sales tax/ Special Excise Duty	(271)	2.07%
Net sales	(3,310)	-4.28%

The company sold 4,304,893 bags of 50 kg each (2021: 4,805,497 bags) of White Refined Sugar during the year. The selling price of sugar has been decreased as compared to last year due to government intervention in maximum sugar prices for the mills.

The above does not include sales of by products and related sales tax amounting to Rs. 4,183.009 million and Rs. 306.245 million, respectively.

It has been observed that there is only one category, variety or quality of the product under reference.

13. PROFITABILITY:

Exclusive of sales Tax

	2022		2021	
	Rupees	Rs. per metric ton	Rupees	Rs. per metric ton
Gross Sugar Sales (own manufactured)	15,923,707,483	73,980	18,570,833,541	77,290
Total Cost to make & sell (Annexure - 1)	13,965,862,716	64,884	16,507,813,175	68,704
Profitability (owned manufactured)	1,957,844,766	9,096	2,063,020,367	8,586

Inclusive of sales Tax

	2022		2021	
	Rupees	Rs. per metric ton	Rupees	Rs. per metric ton
Gross Sugar Sales (own manufactured)	18,687,709,096	86,821	21,721,318,336	90,402
Total Cost to make & sell (Annexure - 1)	16,729,864,330	77,725	19,658,297,970	81,816
Profitability (owned manufactured)	1,957,844,766	9,096	2,063,020,367	8,586

The above does not include profitability of by products.

(a) Profit per machine hour

	2022 (Rupees)	2021 (Rupees)
Gross profit (Rupees)	1,957,844,766	2,063,020,367
Machine hours of actual crushing	3,083	2,564
Profit per machine hour (Rupees)	634,990.75	804,567.77

(b) Comments on the profitability of different categories of the products per unit as well as in terms of per machine hour, etc. and comments on the adequacy or otherwise of product for maximization of profits

Profitability of the Company depends on the price of sugar in the market and support prices of sugarcane notified by the Government. During the year, the average selling price/metric ton of sugar has decreased by 4.28 % and sales volume decreased by 10.42 % as compared to last year. In current year average selling price is Rs. 73,980 per metric ton while in previous year it was Rs. 77,290 per metric ton. During the year, the gross sales has been decreased by 14.25 % for the year 2022 and accordingly cost of goods sold per metric ton of sugar sold has also decreased by 5.56 % due to better supply of sugarcane, better recovery, decrease in average purchase cost of sugarcane and increase in sugarcane recovery. Gross profit has increased by 7.78 % as compared to the last year. The gross profit margin to sales has increased from 17.99 % to 22.61 %.

It has been observed that there is only one category, variety or quality of the product under reference. As per cost order under Regulation 1(2) "Every Company engaged in the production, processing and manufacturing of sugar in any form except liquid, is required to maintain particulars of cost accounting record and prepare cost statements.

BDO

14. RELATED PARTY TRANSACTIONS

The related parties comprise of associated companies, directors of the Company and entities under common directorship, key management personnel and post employment retirement plan. The Company has entered into transactions with the following related parties for the year ended September 30, 2022.

Name and address of related parties :

Name of the related party	Address
Naubahar Bottling Co. (Private) Limited	38-40 Grand Trunk Road Industrial State Model Town Gujranwala Punjab.
Baba Farid Sugar Mills Limited	2D-1 off MM Alam Road , Block D1, Gulberg III, Lahore Punjab.
Almoiz Industries Limited	2D-1 off MM Alam Road , Block D1, Gulberg III, Lahore Punjab.

The name of the directors and their shareholding percentages has been disclosed in the annual financial statements of the Company for the year ended September 30, 2022.

All the related party transactions for the year ended September 30, 2022 has been disclosed in the annexure B-1 attached to this report.

The transfer prices taken in related party transactions for the year ended September 30, 2022 is inclusive of sales tax .

The normal price charged for the white refined sugar is based on the average market price which is Rs. 4,341.04 per bag (2021: Rs. 4520.10 per bag) and Rs. 4,075.29 per metric ton (2021: Rs. 4,644.36 per metric ton) for bagasse while the market prices for some of the stores, spares, scrap and other machinery items that are available has been mentioned in annexure B-1. Other prices have been taken on purchases basis.

Key management personnel :	**2022 (Rupees)**	**2021 (Rupees)**
Advances received from / (returned to) directors during the year	(50,000,000)	(170,000,000)

Dividend paid	47,623,326	35,993,251
Disposal of vehicle	-	507,132
Lease Commitments	10,200,000	9,750,000

15. DISTRIBUTION OF EARNINGS :

The earnings were distributed to the following parties :		
Employees as salaries and wages, retirement benefits etc.	1,001,558,492	737,759,430
Shareholders as dividends	45,069,696	45,069,696
Company as retained earnings	1,774,962,253	1,626,613,317
Governments as taxes	626,179,595	396,709,187
Extra ordinary expenses	-	-

BDO

16. ADJUSTMENT OF COST VARIANCES :

The Company maintains cost records on actual basis and do not follow standard costing method to determine the cost of its goods and services. Hence no variances has identified and adjusted.

17. OBSERVATIONS AND CONCLUSIONS:

In the course of our examination of the cost accounts of **THE THAL INDUSTRIES CORPORATION LIMITED** for the year ended September 30, 2022, certain weaknesses in the procedures, internal controls and accounting methods came to our notice. We are giving below our observations and conclusions to draw attention to these matters. The responsibility for maintenance of an adequate system of internal controls as well as for prevention and detection of irregularities and frauds rests with the management.

Our audit involves evaluating only those systems and internal controls in the organization upon which we rely for the purpose of determining our audit procedures. Accordingly, our audit may not have identified, and the comments in this report may not be a comprehensive record of all the weaknesses that may exist. However, our audit was planned so that we would have a reasonable expectation of detecting material misstatements in the accounts.

(a) Matters which appear clearly wrong in principle

(i) There is none noted. However, we have noted certain opportunities for improvement which are reported in suggestion for improvements in performance.

(ii) We refer to detail comments on addition to production capacity at note 3 (e) to this report.

(b) ***Usage of company's funds***

There were no cases where the company's funds were used in a negligent or inefficient manner.

(c) ***Controlling factors***

No instances were observed where factors which could have been controlled, but were not done, resulting in increase in cost of production. There is an adequate budgeting and control system.

The Company has an effective internal audit and control function. The Board of Directors has constituted an audit committee, the meetings of which are held on regular basis.

(d) ***Suggestions for improvements in performance***

(i) No significant instances were found of general imbalances in production facilities.

(ii) Cost reduction and increased productivity; key limiting factors causing production bottlenecks; improved inventory policies are important areas to be considered.

Cost reduction and increased productivity:

The Company may make efforts towards optimum utilization of production capacity by promoting pre-season relationship with the growers, thereby ensuring regular supply of improved quality sugarcane.

key limiting factors:

The utilization of installed capacity is dependent upon availability of sugarcane of desired quantity and quality. As a part of long term planning, the Company should started increasing its relationship with growers to ensure regular supply of desired quality sugarcane to fully utilize the production capacity. During the current year 2021-2022, the Company has utilized its installed capacity up to 95.91% (2021: 90.96%).

BDO

Improved inventory policies:

Policies relating to inventory are found satisfactory except that return in stores, spares and loose tools are booked at nil value.

Energy conservancy:

The Company is currently producing the electricity through the steam by using mainly bagasse as input. The production of electricity using the steam is the cheapest way so there are no further opportunities for energy conservancy.

(iii) Study should be conducted to segregate the total production cost into fixed and variable cost, as it would help the management to monitor and control the cost of production.

(iv) The company is applying allocation of overheads consistently over the years. However, we recommend that proper survey should be conducted to determine the percentages of allocation of overheads according to their basis of utilization.

(v) We have observed that fixed assets are not completely coded and tagged. Further, the Company does not have any practice of periodic physical verification of fixed assets. Though, we have been informed by management that random physical verification is being done. We recommend that all the assets should be properly coded and tagged for effective control.

(vi) We noted cost of products has been calculated manually instead of using an automated system. We recommend automated system should be used for cost calculation. In absence of an automated system errors and inaccuracy may result due to the use of manual working where formulas are manually inserted and manual working may result in inefficiency as well.

(e) ***State of technology***

The company has installed up to date plants (Mill max and Mill roller shaft) for the main production facility. In year 2020 the company has installed 165 ton high pressure boiler which results in increase in productivity.

		Layyah Sugar Mills	Safina Sugar Mills	Total Capacity
Plant Crushing Capacity	Metric Tons/day	15,000	8,000	23,000

(f) ***Plant Condition when installed***

The old plants were new when installed.

18. RECONCILIATION WITH FINANCIAL ACCOUNTS

Reconciliation statements of cost of sales, raw material consumed, administrative expenses, distribution and selling expenses and financial charges with audited financial statements for the year ended September 30, 2022 are enclosed herewith.

19. COST STATEMENTS

Copies of all cost statements on the formats prescribed by Securities and Exchange Commission of Pakistan under SRO 1363 (I)/2020 Companies (Audit of Cost Accounts) Regulations, 2020, duly authenticated by the Chief Executive and Chief Financial Officer of the Company, and verified by us are appended to the report.

1300

20. MISCELLANEOUS

Corresponding figures have been rearranged and reclassified, wherever necessary for the purposes of comparison and for better presentation. However, no significant reclassification has been made during the year.

The company has developed appropriate standards for use as a basis to evaluate performance. A team of technical experts and other staff has been employed on permanent basis to monitor and check the plant performance in terms of its economy and maintenance of high quality standards of its product.

Production reports are prepared on daily basis to evaluate the plant performance giving and explaining details of various consumption ratios. The reports not only give these details for the day but also cumulative data for every month and the year ended.

The daily production report also gives number of breakdowns, breakdowns hours, reasons for breakdowns, material consumed per metric ton of sugar produced.

21. GENERAL

21.1 The Thal Industries Corporation Limited was incorporated on September 07, 1953 under the Companies Act, 1913 (Now Companies Act, 2017) as public company, limited by shares. Its shares are quoted on Pakistan Stock Exchange. Its main business activity is manufacturing and sale of white refined sugar and its by product. BDO

THE THAL INDUSTRIES CORPORATION LIMITED
STATEMENT OF PRODUCTION CAPACITY
FOR THE YEAR ENDED SEPTEMBER 30, 2022

Capacity utilization in Production Units

Particulars	2022 Sugarcane crushed	2021 Sugarcane crushed
	Metric ton	
Installed capacity	3,190,000.00	2,610,500.00
Actual utilization	3,059,465.01	2,374,600.59
Percentage of utilization	95.91%	90.96%

Reasons for variances:

Crushing capacity of plants are same i.e. 23,000 MT/day as compared to last year. In current year, mill's lost hours were 74.72% more than those of in last year due to increase in number of crushing days. Due to increases in crushing days, Company has attained 95.91% utilization as compared to 90.96% utilization in last year. Sugar production in 2022 is 33.94% higher than that of last year.

Capacity utilization in Machine Hours

Particulars	2022 Sugar can crushed	2021 Sugar can crushed
	Machine hours	
Installed capacity (Standard hours)	3,321	2,700
Actual utilization (Actual hours)	3,083	2,564
Percentage of utilization	92.85%	94.97%

Reasons for variances:

Standard hours is dependent upon no of working days i.e. 138 days (2021: 113.5 days). The comparative decrease in utilization in current year is due to ineffective use of available hours. Sugar mills temporarily shutdowns for maintenance purposes in the mid of manufacturing season . During the year company stops for more period i.e.9.89 days (2021: 5.66 days) thus decreasing the percentage of utilization in relation to installed capacity by 2.12 %.
